FORAD STUDENT JOURNEY · WEB APP MVP

A team of 3–5 students runs one company for the whole course, one quarter per week.

Every period repeats the same loop: learn what happened, read the new market report, forecast, decide for each country, stress-test, submit. The course ends with an annual report and a defense before a panel.

BUILD STATUS IN THE APP

- Built — Working in the current MVP
- Next — On the build list now (Phase 1)
- Later — Phase 1 later, or Phase 2–3

	Before the game First week of the course		Every period One 90-day quarter, usually one week of class							End of the game Final weeks	
STAGE	01 Join & form a team	02 Meet the company	03 Results day	04 Read the market report	05 Forecast the quarter	06 Decide, country by country	07 Stress-test the plan	08 Review & submit	09 Wait for the run	10 Final results	11 Annual report & defense
How it feels Confidence, low to high	Curious, a bit wary	Overwhelmed	Elated or stung	Focused	Unsure	Stretched	Reassured	Tense, then relieved	Anticipating	Proud or gutted	Under pressure
Goal What the student is trying to get done	**Get into the course and onto a team.**	**Understand the company you inherit and where it is weak.**	**Learn what actually happened last period, and why the share price moved.**	**Know this quarter's starting conditions.**	**Form the team's own view of the quarter.**	**Turn that view into decisions for each country.**	**Make sure the plan survives being wrong.**	**Submit a decision the team can defend, on time.**	**Get ready for the next round.**	**See where the team finished.**	**Explain and defend every decision to a panel.**
What they do Actions, inside and outside the app	Sign in. Join the team with the instructor's code. Split roles: Japan, Germany, treasury, tax.	Read the Period 0 results and the rules. Agree a strategy and how much risk the team will take.	Compare forecasts with actuals. Check the six P/E scores and the cartel ranking. Debrief as a team.	Read the commentary. Note rates, FX spot and forward, oil, cartel volumes and any tender.	Set end-of-period JPY/USD and USD/EUR, oil, sales volumes and prices, and forecast EPS.	Germany's production first (it sets Japan's parts sales), then Japan. Transfer price, dividends, cash, loans, hedges.	Run shocks: yen ±10%, weaker euro, oil spike, demand miss. Adjust hedges and funding. Run again.	Clear the checklist, confirm forecast EPS, submit. Resubmit if something changes before the deadline.	Instructor enters the actuals and runs every team. Students wait for the results alert.	Final ranking by share price. Review the whole history of decisions and results.	Write the annual report. Prepare for questions on speculation, luck and consistency.
Where in the app Screens and backlog IDs	Sign in (S-01) Team join code and roles (S-26)	Dashboard checklist Results · Period 0 (S-16) Practice company (S-29)	Market Reports & Results › Results (S-16) Cartel summary (S-17) Coaching (S-24)	Market Reports & Results › Market reports (S-03) Dashboard: what changed	Company execution › US Holding, Japan, Germany forecasts (S-05)	Company execution › country tabs › Operations, Investing, Financing, Hedging (S-04, S-06 to S-10) Live projection (S-12)	Company execution › Stress test lab (S-20, S-21)	Company execution › Review & submit (S-15, S-22)	Dashboard status Notifications (S-30)	Results history (S-25) Leaderboard (S-17)	Export history (S-18) Annual report pack (S-31)
Thinking The question in their head	*"Who is on my team, and who owns what?"*	*"There are over a hundred inputs. Where do we even start?"*	*"Did our hedge save us, or did we just get lucky?"*	*"Rates held, but the tender market just opened."*	*"Where will the yen be in 90 days? Nobody knows."*	*"If we raise the transfer price, what happens to tax, and to Germany's cash?"*	*"What is our worst case, and could we defend it?"*	*"Is everything in? Did we forget the dividend?"*	*"Results come out tomorrow."*	*"One bad final period can drop a team from first to seventh."*	*"Can we show that position was a hedge, not a bet?"*
Pain in FORAD 2.0 The 2013 Windows program	Windows-only install from setup files. Mac users need Boot Camp or Parallels.	An 81-page manual. Rules live in the PDF, not on screen.	Results posted on a wall; the cartel summary arrives as a separate Excel file.	Commentary handed out separately; rates sit in their own window.	FX forecasts hidden in the US Hedging tabs; blanks silently use last period.	15 grid windows. Press Update (Ctrl+R) to see effects. Errors reset inputs.	Retype extreme forecasts by hand and remember each result.	Save DecisionsT#P#.txt and email it or hand it over on a USB stick.	No status until the next files arrive.	History scattered across CSV files.	Rebuild statements and charts by hand for the report.
How the new app helps Design response	Browser sign-in, any device. One click into the team's company.	Dashboard walks the period step by step. A "?" on every field explains it.	Results in the app for every period: forecast vs actual, scores, ranking.	One report per period, archived, with changes since last period marked.	Forecasts start at last actual and show "Changed" once edited. All listed in Review.	Country tabs with the same four sections. Limits shown inline. Projection updates live.	One-click scenarios, saved run history, and a flag when decisions change after a run.	Submit button, deadline countdown and pre-submit checklist. Forecast EPS locked.	Dashboard shows the period's status; an alert when results publish.	History across all periods, side by side.	Export of every decision and result; a generated report pack later.
Build status In the current MVP	Built Sign-in built. Team codes and roles later.	Later Dashboard built. Results and practice later.	Later Results tab is a placeholder.	Built Market reports and archive working.	Built Forecast fields working, saved on the device.	Next Country tabs built. Inputs next: S-06 Operations.	Later Lab is a placeholder; needs the engine.	Next Review built. Submit next: S-15.	Later Dashboard status built. Alerts later.	Later Later.	Later Later (Phase 3).

↻ Repeat stages 3–9 every period, for the [NUMBER OF PERIODS] periods of the course

One period, as a week

Example rhythm. Each instructor sets the actual calendar and deadline.

DAY 1
Results and new report
Last period's results and this period's market report publish together.

DAY 1–2
Debrief and forecast
Team reviews what happened, then agrees its view of FX, oil and demand.

DAY 2–5
Decide and stress-test
Each owner works their country tabs; the team runs shocks and adjusts.

DEADLINE
Submit
Last chance to resubmit. Forecast EPS is locked for the Planning score.

AFTER
Instructor runs the period
Actuals replace every team's forecasts; the tender auction clears; results publish.
